

Wireless Solutions

www.netversant.com

Industry-leading Solutions, Superior Service

From connecting multiple devices at a single location to creating a multi-location wireless network, NetVersant has the technical knowledge, resources and access to the industry-leading products you require. Ours is a revolutionary company, and we welcome the opportunity to assist you.

Site Surveys

Indoor WLAN

To meet the demanding and often mission critical performance requirements placed on WLAN deployments, a professional site survey is a minimum requirement. Both predictive pre-site visit engineering and on-site real time WLAN coverage survey tools position NetVersant to offer state-of-the-art results.

Outdoor PT-PT/MP (Voice/Data)

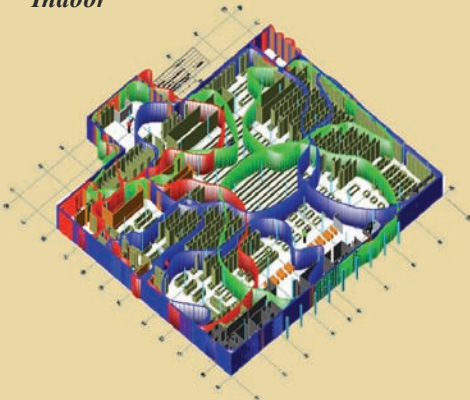

Unlicensed Point to Point and Multi-Point RF systems demand qualified site surveys to guarantee both performance and installation. NetVersant utilizes a number of tools and techniques to ensure that PT-PT and PT/MP links perform with adequate margins of signal strength to maintain reliable links under worst case scenarios. NetVersant has created a unique “NetVersant Experience” based on how we act and interact. Similar to the expectations you have when going to Disneyland, a fine restaurant or high-end hotel, we recognize that you — our valued customers — have expectations.

superior service capabilities

- ✓ Wireless business requirement planning
- ✓ Wireless architecture design
- ✓ Proof of concept / Design / ROI validation
- ✓ Implementation planning
- ✓ Implement site modeling
- ✓ Implementation and coverage validation
- ✓ Ongoing performance and optimization
- ✓ Knowledge transfer

Indoor

Outdoor

we are convergence

In the ever-converging world of voice, video and data, NetVersant offers multiple service lines to provide total communications solutions.

- Wireless/Mobility Solutions
- IT Infrastructure Solutions
- VoIP/Telephony Solutions
- Electronic Security Solutions

System Design, Network Integration and Installation

Indoor

Adding WLAN infrastructure is not simply a matter of “plugging it in.” As with any network addition/expansion, pre-installation network integration planning is required. From ensuring that the current MDF/IDF architecture can support proposed additions to host network configuration — subnets, VLANs, Switch/Router configurations, POEs — to pulling cable and mounting WLAN equipment, NetVersant Solutions provides industry-leading service.

Security and Performance

WLAN installations require ease of access and mobility balanced with security. NetVersant provides pre-installation WLAN security planning/consultation and post-installation compliance testing for Sarbanes-Oxley (SOX), DoD 8100.2 Directive, Health Insurance Portability and Accountability Act (HIPAA) and GLBA: Gramm-Leach Bliley.

Intrusion Detection Systems (IDS) / Intrusion Protection Systems (IPS)

Our solutions provide ongoing monitoring of compliance, network performance and attack mitigation.

Outdoor

Signal propagation control and data encryption, coupled with both vendor-integrated access control and third-party security appliances, are keys to a secure outdoor WLAN/PT-PT/MP installation.

current System Evaluation AND UPGRADES

NetVersant has an extensive implementation experience in a wide range of industries:

- Manufacturing
- Healthcare
- Distribution
- MAN
- Education
- Enterprise
- Retail
- WISP

- ✓ NetVersant’s experience and depth of knowledge, enhanced by our solution perspective and relationships with the leading manufactures in indoor and outdoor wireless equipment, uniquely positions us to consult, design, install and maintain best-in-class solutions.
- ✓ We are always on the alert for technologies that allow both improved convergence of existing standalone systems and support for emerging technologies such as RFID.
- ✓ Without question, NetVersant employs the industry’s most talented people and we are proud to maintain a staff of industry-certified system engineers and field engineers across the United States.
- ✓ Utilizing the best tools and the most highly trained talent in the industry, NetVersant delivers local, regional and national indoor and outdoor wireless solutions.
